

BiSect

Insect deterrent

BiSect is a natural broad spectrum insect deterrent.

It combines the beneficial insect deterring properties of several naturally occurring botanical oils including ;

Neem, Clove & Garlic.

BiSect can be used as a foliar spray where it will provide a physical barrier to leaf sucking insects or it can be incorporated into the soil to deter root feeders.

BiSect contains more than 25 active natural compounds that deter insects. It works on contact but also has a systemic action.

BiSect is also considered to play a preventative role against common leaf diseases such as Helmo, Mildews, Rust, Anthracnose, Leaf spot, Botrytis, Scab & Alternaria.

Turf Foliar For fungal & leaf eating insects	Turf Drench For subterranean pests	General Use
3-3.5L/ha Left on leaf Apply fortnightly if problems persist	3-3.5L/ha Water in after application Apply fortnightly if problems persist	50ml per 10L Water Spray to cover all parts of the affected plant

- Spray early morning or late afternoon out of the heat of the day
- Test spray on young plants first
- Avoid spraying during flowering as this may interfere pollinators
