Cal Shuttle is a potent liquid fertilizer which contains a highly available (chelated) form of Calcium with Nitrogen & Trace Elements. **Cal Shuttle** is extremely effective at addressing short term Calcium deficiencies or can be used regularly to ensure an adequate supply of Calcium is available to the plant.

Calcium plays a major role in the development of cell walls, especially during cell division, it is crucial in building resistance against pest and disease attack and building the plants immune system.

Calcium plays a key role in protecting the cell from toxins and in slowing the ageing process. **Cal Shuttle** offers Calcium in a balanced formulation which covers the full spectrum of "background nutrition".

- **Sequesters, chelates and delivers more nutrition than previously possible.**
- **Small molecular size increases chelation effectiveness.**
- **Serves as a carbohydrate-based microbial stimulant.**
- **Contains "background nutrients" to avoid correcting one shortage and triggering another due to antagonistic effects.**

Application Rates:

Cal Shuttle is an ideal inclusion with regular foliar fertilizers and should be applied at 30 ml – 50 ml/100m².

General landscape use (trees, shrubs, garden areas, including natives): Apply 50 ml – 100ml/100m²) via a fertigation or irrigation system.

Dilution. (minimum dilution 1:100)
