

Liquid Fish

Natural Fish Fertilizer

Liquid Fish is manufactured using a low temperature natural enzyme process which preserves the nutritional value of the proteins and key nutrients, making the nutrients immediately available to the plant.

Liquid Fish is a concentrated biological stimulant which will revitalise soils and re-invigorate plant root systems.

Liquid Fish is an organic product that will also help relieve stress in plants.

Benefits of **Liquid Fish** include :

- Supply of natural nutrients that are immediately available to the plant
 - Promotes beneficial microbial activity
 - Has natural chelating properties
- Less leaching compared to chemical fertilizers
- Promotes healthier plants and increased disease resistance
