

RootMax

Plant root stimulant & stress relief

RootMax combines the nutritional and stimulatory properties of Deep Sea Kelp. The Deep sea kelp is manufactured from Bull kelp using a unique cold digestion process to retain the nutritional properties of the kelp.

RootMax also contains Saponin, a natural/organic plant stimulant which also acts as a powerful natural surfactant.

RootMax also contains a broad spectrum of plant nutrients as well as vitamins, amino acids, plant growth hormones (Cytokinin's & Auxins) and enzymes.

RootMax will promote root growth and vigour and also relieve plant stress and aid stress recovery

The natural compounds contained in **RootMax** will stimulate beneficial microbial activity on the surface of roots and seeds and help breakdown surface tension, increase percolation and moisture retention in the soil.

Liquid	Sandy Soil	Loamy/Clay	Crops /	Garden beds	Home lawns
Water into profile	5-10L/ha Monthly	7-10L/ha Monthly	2.5L/Acre Monthly	5ml/1L water Every 2- 4 weeks	100ml/100m2 Every 2-4 Weeks
