

# SoilSafe

SoilSafe granular fertilizers are biologically activated – they are slow release mineral fertilizers, which combines a balanced nutritional formulation and is ideal where long term sustainable feeding is required. SoilSafe granulars are a fertilizer, soil conditioner and biological inoculant rolled together into one. Organic acids and beneficial microbes have been used to complex the minerals and nutrients.

## SoilSafe Greens Bio-Mineraliser

SoilSafe Greens Bio-Mineraliser also contains organic Carbon and Rock minerals to build CEC and soil quality. The slow, continual release of nutrients provided by the rock mineral base of SoilSafe Greens Bio-Mineraliser is a perfect addition for light/sandy profiles. It is also the perfect 'complete' option for renovation or maintenance programs.

## SoilSafe Mend

SoilSafe Mend contains a comprehensive suite of 16 important plant minerals and a total of more than 20 components. Mend is a 'living fertilizer', containing organic acids and microbes which have been used to complex and chelate minerals and nutrients to improve availability and stability. SoilSafe Mend contains organic carbon and rock minerals to help build Cation Exchange and soil quality whilst providing a slow & continual release.
